

Report on "Stirwand" Quantum Age water

Stability Testing

By Fenestra Research Labs

Overview

12/4/06

A 16-ounce container filled with purified water was stirred with the "Stirwand" for 20 seconds and then tested using the ***Optimal Wellness In Vitro Method***. That 16-ounce container was then sealed and stored on a shelf with the room temperature being about 78 degrees, for ninety-days. At the end of that 90-day period the same 16 ounce container was then re-tested using the ***Optimal Wellness In Vitro Method*** and the measurements of that water remained within 95% of it originally tested parameters.

*Container: Number 7 polycarbonate bottle, 16-ounce size

CONCLUSION

The purified water after being stirred with the "Stirwand" for 20 seconds is 95% unchanged after 90-days/12-weeks, contained in a closed container and stored in a standard home like environment.
